2. Safety

Product safety and RF Exposure for hand-held two-way radio

Before using this two-way radio, please read carefully the attached manual instruction in the random incidental for the safe use of the product.

This radio is limited to professional applications that meet FCC radio-frequency energy requirement. Before using this two-way radio, please read the manual which contains important operating instructions for safe usage, RF Energy/Awareness, control information and operational instructions for compliance with RF Energy Exposure limits in applicable national and international standards. Also read the operational instructions for safe use.

3. Overview

Turn on Radio

Clockwise rotate the volume knob to turn on the radio until hear a sound of “KADA”, and it will make a short prompt tone, the LCD of radio displays the boot interface. The LED indicator lights on green.

⚠**Note:** If the LED indicator is disabled, the green light is not on when opening the radio. But it will make a short prompt tone, indicates that the startup is successful.

⚠**Note:** If the “Tones/Alert” function of the radio is turned off, it will not make startup tone. To turn off the radio, counter-clockwise rotate the volume knob until hear a sound of “KADA”.

Adjust Volume

Clockwise rotate the volume knob to higher the volume or anticlock-wise to lower.

Upgrade Mode

When the radio is in the “Off” status, press the PTT key and SK1 key at the same time, then turn on it, the red light and green light will alternately flash, which means that the radio has entered to the upgrade mode.

4. Launch and Receive Calls

Zone Select

The zone is a channel group, this radio can support 250 zones at most and a maximum of 16 channels can be added for each zone.

Menu Usage:

1. Press the [(☰)] key to enter the menu mode.
2. Press the [(▲▼)] key to “Zone”, then press the [(☰)] key to enter zone list.
3. It will display the current name of zone.
4. Press the [(▲▼)] key to the zone that you need, then press the [(☰)] key to confirm.
5. The LCD will show “Zone Selected”, and back to the main screen.

Channel Select

After the zone is selected (If the radio has many zones), rotate the channel knob to select the channel.

Receive and Reply Group Call

To receive calls from the user group, the radio must be configured to belong to that user group.

When receive the group call:

1. The LED indicator lights on green.

2. In the display area below the top row: the first row displays the ID of the caller, the middle row displays the name of call group, the right displays the icon of group call (only in the digital mode).

3. Hold the radio, let it is in a vertical position and 1 to 2 inches (2.5 to 5.0 cm) away from the mouth.

4. Press the PTT key to reply the calling, the LED indicator will light on red.
5. Release the PTT key to listen.
6. If there is no voice activity during the pre-set time, the calling will finish.

Receive and Reply Private Call

The private call is a call that made from one individual radio to another individual radio. There are two types of private call: first type, it will detect whether there are radios before the call is ready; another type, it is ready to call immediately.

When receive the private call:

1. The LED indicator lights on green.
2. In the display area below the top row: the first row displays the user's name or ID, the middle row displays the private call, the right displays the icon of private call (only in the digital mode).
3. Hold the radio, let it is in a vertical position and 1 to 2 inches (2.5 to 5.0 cm) away from the mouth. If the function of “CH Free Indication Tone” is enabled, when the transmitter releases the PTT key, you will hear a short prompt tone, which means the channel is free and waiting for your reply.
4. Press the PTT key to reply the calling, the LED indicator will light on red.
5. Release the PTT key to listen.
6. If there is no voice activity during the pre-set time, the calling will finish.

Receive All Call

The all call is a call that made from one individual radio to the other radios which in its channel. It is used to make important announcements that require special attention from users.

When receive the all call:

1. The LED indicator lights on green.
2. In the display area below the top row: the first row displays the user's name or ID, the middle row displays the all call, the right displays the icon of all call (only in the digital mode).
3. After the all call finished, the radio will return to the screen which before receiving the all call. If the function of “CH Free Indication Tone” is enabled, when the transmitter releases the PTT key, you will hear a short prompt tone, which means the channel is free, but you cannot reply the all call.

⚠ **Note:** When receiving the all call, if you switch the channel to another one, the radio will stop receiving the all call. And you cannot use any preset programmable key until the calling finished during all call times.

Launch Call

You can use the ways as follow to select one of the channels, user's ID or call group:

- Channel knob
- The preset programmable key of “One Touch Access”
- Contact list

Use Channel Knob to Launch Call

Launch group call

To initiate the calls to the user group, the radio must be configured to belong to that user group.

1. Rotate the channel knob, use the activated group call name or ID to select the channel.
2. Hold the radio, let it is in a vertical position and 1 to 2 inches (2.5 to 5.0 cm) away from the mouth.
3. Press the PTT key to initiate a call, the LED indicator will light on red. And the LCD will display the name or ID and icon of group call.
4. Release the PTT key to listen, when received the reply from target radio, the LED indicator will light on green. The LCD will display the icon, name or ID of group call and the transmitter's name or ID.
5. If the function of “CH Free Indication Tone” is enabled, when the target radio releases the PTT key, you will hear a short prompt tone, which means the channel is free and waiting for your reply. Press the PTT key to answer, or if there is no voice activity during the preset time, the calling will finish.
6. The radio returns to the screen which before receiving the call. You can also initiate the group call by contacts.

Launch Private Call

1. Rotate the channel knob, use the activated user's name or ID to select the channel.
2. Hold the radio, let it is in a vertical position and 1 to 2 inches (2.5 to 5.0 cm) away from the mouth.

3. Press the PTT key to initiate a call, the LED indicator will light on red. In the display area below the top row of screen: the first row displays the name or ID of user, the middle row displays the private call, the right displays the icon of private call (only in the digital mode).
4. Release the PTT key to listen, when received the reply from target radio, the LED indicator will light on green.
5. If the function of “CH Free Indication Tone” is enabled, when the target radio releases the PTT key, you will hear a short prompt tone, which means the channel is free and waiting for your reply. Press the PTT key to answer, or if there is no voice activity during the preset time, the calling will finish.
6. You can also initiate the private call by contacts or quick access the contacts by keyboard, search the target radio that you need.

Launch All Call

This function allows you to send the signal to all users in the channel. The premise is that the radio must be set to allow the function.

1. Rotate the channel knob, use the activated all call's name or ID to select the channel.
2. Hold the radio, let it is in a vertical position and 1 to 2 inches (2.5 to 5.0 cm) away from the mouth.
3. Press the PTT key to initiate the call, the LED indicator will light on red. And the LCD will display the name or ID and icon of all call.

The user who in the channel cannot reply to the all call.

Use the Key of One Touch Access to Launch Group Call or Private Call

The function of one touch access allows you to easily make group or private calls to predefined name or ID. This function can be assigned to the short press key or long press key. And each one touch to access key can be assigned a name or ID, the radio has many programmable keys of one touch access.

1. Press the preset programmable key of one touch access, make a group or private call to predefined name or ID.
2. Hold the radio, let it is in a vertical position and 1 to 2 inches (2.5 to 5.0 cm) away from the mouth.
3. Press the PTT key to initiate the call, the LED indicator will light on red. The LCD will display the name or ID of call group/user and the group/private call's icon.
4. Release the PTT key to listen, when received the reply from target radio, the LED indicator will light on green.
5. If the function of “CH Free Indication Tone” is enabled, when the target radio releases the PTT key, you will hear a short prompt tone, which means the channel is free and waiting for your reply. Press the PTT key to answer, or if there is no voice activity within the pre-set time, the calling will finish.
6. The radio returns to the screen which before receiving the call.

5. Emergency Alarm Function

The emergency alarm mode is used to indicate that in an emergency, you can activate the emergency alarm at any time or in any screen, even if there is activity on the current channel.

The radio supports three types of alarm mode:

Emergency Alarm

Emergency Alarm w/Call (Emergency alarm with call)

Emergency Alarm w/Voice To Follow (Emergency alarm with voice to follow)

In addition, it also contains four alarm types:

Disabled: The radio cannot launch the signal of alarm, but it can receive the alarm from other radios.

Regular: The radio can launch the signal of alarm and receive the incoming calls. Before you press the PTT key to initiate a call or receive a incoming call, it will have the prompt of voice or visual.

Silence: The radio launches a signal of alarm, there are no any voice or visual prompt. Before you press the PTT key to initiate a call, this radio cannot receive the calling from the target radio.

Silence w/Voice (Silence with Voice): The radio can launch the signal of alarm and receive the incoming calls. Before you press the PTT key to initiate a call or receive a incoming call, there are no any voice or visual prompt.

Only one of the above emergency alarms can be assigned to the preset programmable emergency call key.

Receive Emergency Alarm

1. When receiving the emergency alarm, the number and type of alarm will alternate with the transmitter's name or ID.
2. It will make a prompt tone, and the LED will light on red.
3. If activated, your radio will automatically confirm an emergency alarm. When the radio receiving the emergency alarm, the LCD will display a notification that an emergency alarm has been received until confirmation is sent and you exit emergency mode. At this time, the radio will not receive any other prompts or display any other calls until you exit the screen of receiving emergency alarm.

⚠ **Note:** Short press the key of [ ] , then press the preset programmable “emergency off” key to delete the prompts of receiving emergency alarm and exit the alarm mode.

Reply Emergency Alarm

When receiving the emergency alarm:

1. Press any key to stop all prompts of incoming emergency alarm.
2. Hold the radio, let it is in a vertical position and 1 to 2 inches (2.5 to 5.0 cm) away from the mouth. If the function of “CH Free Indication Tone” is enabled, when the transmitter releases the PTT key, you will hear a short prompt tone, which means the channel is free.
3. Press the PTT key to initiate a call with the radio who launched an emergency call. The LED indicator will light on red and the radio will be in the mode of emergency call.
4. Release the PTT key to listen, when received the reply from transmitter, the LED indicator will light on green. You will see the icon & ID of the group call and the transmitter's ID.

5. When the call is over, short press the key of [ ], then press the preset programmable “emergency off” key to delete all prompts of receiving emergency alarm and exit the alarm mode.
6. The radio returns to main screen.

Launch Emergency Alarm

This function allows you to launch the emergency alarm, it's a non-voice signal that will trigger an alert on another radio.

1. Press the “emergency on” preset programmable key.
2. The screen displays “Emergency”, and it will alternate with the radio's ID. The LED indicator lights on red.
3. When the confirmation of emergency alarm is received, it will make the prompt tone of emergency call, the LED indicator lights on green. And the screen will display “emergency alarm succeeded”. Or if the radio doesn't receive any confirmation of emergency alarm, and after all numbers of retry have been used up, it will make a prompt tone, the screen will display “emergency alarm failed”.
4. The radio exit the mode of emergency alarm, and returns to the main screen. If your radio is set to “Silent”, it will not display any voice or visual prompt in the emergency call mode.

Launch Emergency Alarm with Call

This function allows you to launch the emergency alarm, it's a non-voice signal that will trigger a prompt on another radio.

1. Press the “emergency on” preset programmable key.
2. The screen displays “Emergency”, and it will alternate with the radio's ID. The LED indicator lights on red.

3. When the confirmation of emergency alarm is received, it will make the prompt tone of emergency call, the LED indicator lights on green. And the screen will display “emergency alarm succeeded”.
4. Hold the radio, let it is in a vertical position and 1 to 2 inches (2.5 to 5.0 cm) away from the mouth.
5. Press the PTT key to initiate a call, the LED will light on red, and the icon of the group call will appear in the screen.
6. Release the PTT key to listen.
7. If the function of “CH Free Indication Tone” is enabled, when the target radio releases the PTT key, you will hear a short prompt tone, which means the channel is free and waiting for your reply. Press the PTT key to answer, or press the “emergency off” key to exit the emergency mode.
8. The radio returns to the main screen. If this radio is set to “Silent”, it will not display any voice or visual prompt in the emergency call mode, and it also cannot receive any response(calls) from the target radio until your press PTT key to initiate the calling. If your radio is set to “Silence w/Voice”, it will not display any voice or visual prompt in the mode of emergency call or when you receive the calling from the target radio. The prompt will display only when your press PTT key to initiate or answer the calling.

Launch Emergency Alarm with Voice to Follow

This function allows you to launch an emergency alarm to another radio. After confirmation, the microphone of your radio will activate automatically, it allows you to talk with other radios without pressing the PTT key. This state of activated microphone is called "emergency microphone". If the PTT key is pressed during the preset

programmed emergency microphone is launching, the radio will ignore the pressed PTT and remain in emergency mode.

⚠**Note:** If you press the PTT key during the “emergency microphone”, and continue to press the key after the duration of emergency microphone ends, the radio will continue to transmit until you release the PTT key.

1. Press the “emergency on” preset programmable key.
2. The screen displays “Emergency”, and it will alternate with the radio's ID. The LED indicator lights on red.
3. When the screen displays “emergency alarm succeeded”, you can talk to the microphone. After the emergency microphone is activated, the radio will automatically transmit the signal without pressing PTT key until the time of emergency microphone ends.
4. The LED will light on red and the “emergency call” will display in the screen when the radio is transmitting.
5. After the duration of emergency microphone ends, the radio will automatically stop transmitting the signal. If you want to transmit again, press the PTT key. When the radio is set to “Silent”, it will not display any voice or visual prompt in the emergency call mode, and it also cannot receive any response from the target radio until the time of preset programmed emergency microphone has ended and you press the PTT key. If your radio is set to “Silence w/Voice”, in the mode of emergency call, when you use the microphone of emergency call to initiate the calling, or when the time of preset programmed emergency microphone has ended, the target radio responding, it will not display any voice or visual prompts. Only when your press the PTT key, these prompts can appear.

⚠ **Note:** If the request of emergency alarm failed, the radio will return to the main screen.

Restart Emergency Mode

There are two scenarios in which this can occur:

When the radio is in the emergency mode, switch channel will exit this mode. If you activate the emergency alarm of new channel, the radio will restart the calling.

Press the preset programmed “emergency on” key during the emergency call starts/transmits. It will cause the radio exits the state, and restarts the emergency call.

Exit Emergency Mode

When occur one of scenarios as follow, the radio will exit the emergency mode:

Receive the confirmation of emergency alarm(for emergency alarm only)

Has reached the maximum attempts of transmitting alarm.

Press the preset programmed “emergency off” key

Press the PTT key

⚠ **Note:** If turn off the radio, it will exit the emergency mode. When turn on the radio again, it will not restart emergency mode.

6. Menu Operation

Privacy Setting

If this function is enabled, it is helpful to prevent other users who on the channel from using the software encryption method to eavesdrop without authorization. The transmitted signaling and identification parts of user are not encrypted. The radio needs to enable the function of encryption, and it can send the encrypted transmission.

Basic Encryption

The radio can set one privacy type, if you want to decode the privacy call or date transmission, the receiver need to set the same “encryption key” as the transmitter (suitable for basic encryption).

If your radio receives the privacy calls that with different encryption keys or different key values and key IDs, you will hear the voice of transmission confusion (basic encryption). Press the preset programmable key can turn on/off the privacy.

DTMF

The function of DTMF allows radio to operate when its system with interference.

Initiate a DTMF call:

1. Press the PTT key.
2. Input the number that you need.

You can close the tones of DTMF by turning off the “All Tones” of the radio.

Kill/Activate

You can activate/kill any radio in the system. For example, if the radio was stolen or lost, it can prevent thieves from using it and when you get the radio back, you can enable it.
